IS STOP START DRIVING CHOKING YOUR DIESEL ENGINE?

Take the 'strangle hold' off your diesel engine with a Terra Clean Diesel Intake and EGR carbon removal service. This is a preventative maintenance service that can help prevent future costly damage!

HOW DOES CARBON BUILD UP IN THE DIESEL INTAKE SYSTEM?

- » Diesel engines rely on drawing in large quantities of air to operate efficiently, over time carbon deposits builds up on the inner walls of the induction system due to emission control devices such as exhaust gas recirculation (EGR) valves and the use of low viscosity engine oils.
- » Over time your engine will progressively become contaminated with carbon, restricting air flow into the engine & negatively affecting the performance of your Diesel engine.

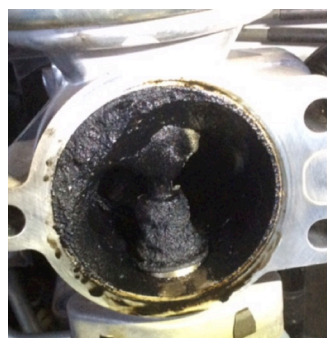

HOW CAN YOU PREVENT FUTURE COSTLY DAMAGE?

"The Terra Clean on-car special service tool is used to remove the deposits that impact on vehicle performance and can cause costly damage. It is applied to the induction system using the Terra Diesel Induction and EGR special service tool.

TERRA CLEAN ON-CAR SPECIAL SERVICE TOOL FEATURES AND BENEFITS:

- » Removes Carbon Deposits from EGR and Induction Systems
- » Reduces DPF Regeneration Cycles
- » Lowers Emissions and Smooths rough idle
- » Improves Performance and Fuel Economy
